# Smart

## Workflow

• **Printable Job Ticket**

- Generate Job Ticket on-the-fly
- Fully Customizable
- Can include: Job Thumbnail
- Customer Logo
- Bar Code for Electronic Job Tracking

### Smart Tools

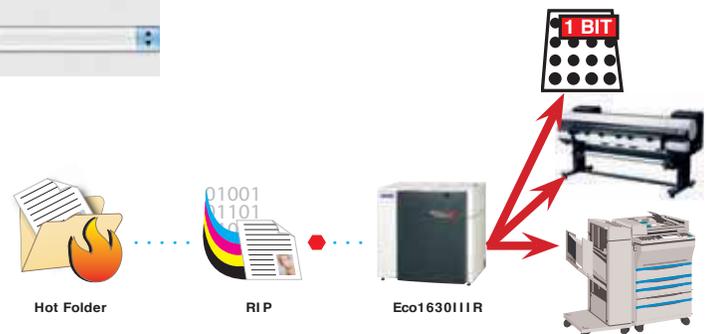

A fully featured workflow solution designed to meet your production needs. Start with a base version and then add other functionality in the future. Instantly you will see the benefits of Smart Tools Server/Client architecture. Installing the Smart Tools Client on any Mac or PC workstation will allow you to administer, configure or control file production. Since the Smart Tools Client is an extension of the server you can drag & drop files directly into any workflow. The workflow will accept .AI, .EPS, .PDF and .PS file formats. Once your job appears in the list just right click on the job and gain access to additional job information and control.

### Job control at your finger tips

When time is of the essence Smart Tools allows on-the-fly Page Setup editing. Entering edit mode allows the user access to core RIP settings that can be changed or modified while the RIP is processing other jobs. Changes can be made globally or on a per job basis. Quickly modify separation settings, trapping, rotation and page features. When editing is complete the user can resubmit the job to be reprocessed.

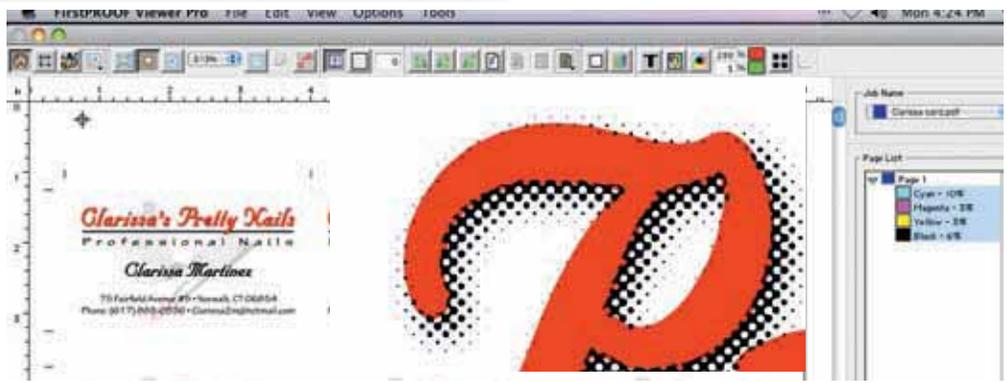

### Multiple output made easy.

Redirect any job to another workflow setup for additional output. Create a 1 bit TIFF for older legacy devices or generate a 8 bit color managed TIFF for various proofing devices and even output to your desktop or office printer.

# Tools

## Automation

### Ensure correct output

Once the plate files have been generated by the RIP you can view the actual 1 bit TIFFs that will be used to generate the plates. Using the zoom tool will allow you to enlarge the TIFFs up to 800% and to check the file for knockouts, overprints, moiré, traps, ink density or separations to be output.

## Scale Your Workflow With Optional Modules

- **PDF Creation**
- High Quality for Print
- Low Res for Soft Proofing
- Fully Compatible with Acrobat

- **Integrated Preflight**
- Utilizes Enfocus Pitstop
- Generates Interactive Reports
- Automatic File Correction

- **PDF Checker**
- Check PDF Output Intent
- Create Certified PDF
- Ensure Correct Output

- **PDF Imposition**
- Acrobat Plug-in
- Wizard or Manual Modes
- Imposition Preview
- Imposed PDF Export
